DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States
- 2. Claims 1-4, 12-17, 25, and 26 are rejected under 35 U.S.C. 102(b) as being anticipated by Csak (US 4,651,481).

Regarding claim 1, Csak discloses a method for vibration-dampening aournd a structure (seen as superstructure 2), comprising disposing a plurality of adjoining column members (seen as mandrels 3 adjoined by bushings 4), and an elastic member (seen as rubber sheets 6), underground directly underneath or around said structure (as seen in Fig. 1), the column members forming a hard layer contiguous with the elastic layer (as seen by the sandwich 5 in Fig. 1), wherein the column members have a greater stiffness than the surrounding ground (since Csak discloses that mandrels 3 are made of steel in column 4, line 55).

Regarding claim 2, Csak discloses that mandrels are made of steel (Col 4, line 55).

Regarding claim 3, Fig. 1 of Csak shows the mandrels (3) surrounding the elastic material (6) that is therebetween.

Regarding claim 4, Fig. 1 of Csak appears to illustrate the mandrels (3) as having a cylindrical in cross section.

Application/Control Number: 10/700,547

Art Unit: 3671

Regarding claim 12, the bottom of superstructure (2) of Csak can be viewed as the support of the elevated structure.

Regarding claim 13, Fig. 2 of Csak illustrates a plurality of such basic units underneath the structure (2).

Regarding claim 14, Csak discloses a system capable of preventing or reducing vibration around a structure which generates vibration or receives vibration, the system comprising:

- an elastic member (seen as rubber sheets 6 in Fig. 1),
- a plurality of adjoining column members (seen as mandrels 3 adjoined by bushings 4), disposed around a periphery of the elastic member, the column members forming a hard layer contiguous with the elastic member (seen as sandwich 5 in Fig. 1), wherein the elastic member and the column members are disposed underground directly beneath or around said structure (seen in Fig. 1 as the superstructure 2), the column member having a greater stiffness than the surrounding ground (since Csak discloses that mandrels 3.are made of steel in column 4, line 55).

Regarding claim 15, Csak discloses that mandrels are made of steel (Col 4, line 55).

Regarding claim 16, Fig. 1 of Csak shows the mandrels (3) surrounding the elastic material (6) that is therebetween.

Regarding claim 17, Fig. 1 of Csak appears to illustrate the mandrels (3) as having a cylindrical in cross section.

Application/Control Number: 10/700,547

Art Unit: 3671

Regarding claim 25, the bottom of superstructure (2) of Csak can be viewed as the support of the elevated structure.

Regarding claim 26, Fig. 2 of Csak illustrates a plurality of such basic units underneath the structure (2).

Allowable Subject Matter

3. Claims 5-11 and 18-24 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

4. Applicant's arguments filed 4/21/05, regarding the rejection of claims 1-4, 12-17, 25, and 26 under 35 USC 103(a) using Lin (US 5,669,736) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new grounds of rejection is made in view of Csak (US 4,651,481).

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
